

Description

The LED board serves as a status signal in CNC controls from Sorotec. It is connected to the Interface Advanced PRO or Simple-BOB board with the supplied ribbon cable.

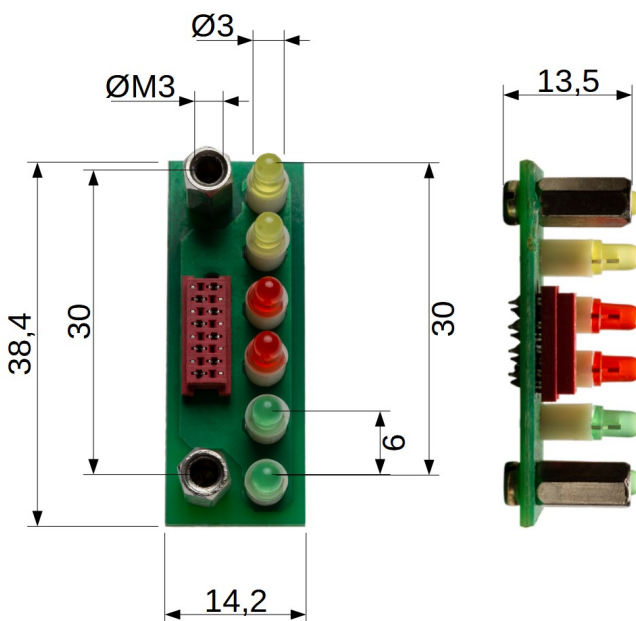

Any use other than that described is not intended. The simple wiring with LEDs that are directly connected to the socket nevertheless makes it easy to use in other projects.

Meaning of the LEDs

- Green 1 power
- Green 2 watchdog *
- Red 1 output stage error
- Red 2 emergency stop
- Yellow 1 relay 1 (outlet 1)
- Yellow 2 relay 2 (outlet 2)

* Watchdog: Breakout board is activated, when the LED lights up.
